

BIOLOGY (BIOL)

BIOL*6500 Biology Education, Curriculum Design & Pedagogy Summer Only [0.25]

This course explores biology higher education and curriculum design through primary literature review, personal reflections and in-class discussion, ending with application of knowledge in mini-lesson presentations where classmates provide feedback.

Offering(s): Annually

Restriction(s): Credit may be obtained for only BIOL*6500/BIOL*6510 or UNIV*6800

Department(s): Dean's Office, College of Biological Sciences

Location(s): Guelph

BIOL*6100 Professional Skills and Qualifications in Wildlife Biology Fall, Winter & Summer Reg Req [0.50]

In this course, students choose professional workshops and skills that support their career path. The creation of an Independent Pathways Portfolio (IPP) sets the stage for students to have the flexibility to complete professional skills, techniques, and qualifications throughout the entire duration of their program.

Offering(s): Annually.

Restriction(s): Restricted to Master of Wildlife Biology students.

Department(s): Department of Integrative Biology

Location(s): Guelph

BIOL*6110 Emerging Problems and Opportunities in Wildlife Biology Fall Only [0.50]

Students attend a series of lectures and/or guided discussions with panelists regarding emerging issues that impact wildlife with an emphasis on emerging diseases, threats due to climate change, and mitigation strategies in Canada.

Offering(s): Annually.

Restriction(s): Restricted to Master of Wildlife Biology students.

Department(s): Department of Integrative Biology

Location(s): Guelph

BIOL*6130 Practicum or Major Research Project in Wildlife Biology Summer Only [1.00]

A major research project or practicum is completed and presented by students in the Master of Wildlife Biology program. Projects may involve primary research or the application of knowledge. Professionalism and communication skills in written, oral, and visual formats are also emphasized.

Offering(s): Annually. First offering Summer 2024

Restriction(s): Restricted to Master of Wildlife Biology students.

Department(s): Department of Integrative Biology

Location(s): Guelph

BIOL*6140 Applied Field Biology Fall Only [0.50]

This course introduces students to a variety of field and analytical methods used for species surveys and environmental assessment. Oral, written, and visual communication skills, considering diverse stakeholders, are also emphasized.

Offering(s): Annually

Restriction(s): Restricted to Master of Wildlife Biology students.

Department(s): Department of Integrative Biology

Location(s): Guelph

BIOL*6150 Wildlife Rehabilitation in Practice Fall Only [0.50]

This course is designed for students to gain valuable knowledge and hands on experience in wildlife rehabilitation practice through a series of lectures and labs. Students learn about wildlife rehabilitation and the skills necessary to care for sick, injured, or orphaned wildlife. Labs include stabilization techniques, physical examination, feeding (gavage) techniques, technical diagnostic skills, and comparative anatomy that is relevant in wildlife rehabilitation.

Offering(s): Annually

Restriction(s): Restricted to Master of Wildlife Biology students.

Department(s): Department of Integrative Biology

Location(s): Guelph

BIOL*6160 Chemical Immobilization of Free-Ranging Wildlife Unspecified [0.50]

This course is designed for students interested in a career working with free-ranging wildlife (specifically with wild canids, ursids, cervids). Students critically examine whether chemical immobilization of a wild animal is required and consider human safety and animal welfare concerns. Students are taught how to safely handle tranquilizing equipment and drugs.

Offering(s): Annually

Restriction(s): Restricted to Master of Wildlife Biology students.

Department(s): Department of Integrative Biology

Location(s): Guelph

BIOL*6170 Stress and Resilience in the Anthropocene Unspecified [0.50]

How can physiological and behavioural plasticity help vertebrates cope with human-induced rapid environmental change? What are stress responses, when do they indicate that an animal's coping mechanisms are over-taxed, and does this mean that wild animals 'suffer'? And when and how should we treat wild animals with more compassion?

Offering(s): Annually

Restriction(s): Restricted to Master of Wildlife Biology students.

Department(s): Department of Integrative Biology

Location(s): Guelph

BIOL*6510 Biology Education Practicum Fall and Winter [0.25]

In this course, students work with an instructor mentor to revise and deliver a unit to an undergraduate course. Students meet with their mentors to discuss the outcomes of the unit, design principles and plans for revision. After delivery, feedback is provided.

Offering(s): Annually

Prerequisite(s): BIOL*6500

Restriction(s): Instructor consent. Credit may be obtained for BIOL*6500/BIOL*6510 or UNIV*6800

Department(s): Dean's Office, College of Biological Sciences

Location(s): Guelph
